

Exhibit A

Harava Insights

*Mobile App &
Back-end Office Platform*

Client Intelligence · Staff Operations · White-Label SaaS

Harava Insights is an integrated AI-powered intelligence platform that combines financial analytics, accreditation compliance, and professional development into a unified ecosystem—empowering organizations to make smarter decisions, maintain continuous compliance, and build high-performing teams.

The intelligence layer powering business performance, compliance, and growth

John

FinSight AI

From Numbers to Decisions

Ich

Executive Summary

One platform, two experiences — built for how Harava actually works

Harava is the trusted partner for accounting, tax, healthcare consulting, and business advisory—empowering clients across the United States and Nigeria to make confident, high-impact financial decisions.

FinSight AI is an AI-powered accounting and CFO aspect of the platform that gives business owners and executives real-time visibility into their financial health, transforming complex financial data into clear, actionable insights for faster, smarter decision-making.

Key Value Pillars (Aligned with Your Platform)

- Real-Time Financial Visibility – live dashboards across revenue, cash flow, and profitability
- AI-Driven Insights – automated analysis, anomaly detection, and recommendations
- Predictive Forecasting – scenario modeling and forward-looking planning
- CFO-in-a-Box Capability – enterprise-level financial intelligence for SMBs
- Decision Intelligence – translate numbers into strategy

This application covers four phases of delivery

PHASE 1 — MVP

Foundation

Weeks 1 – 4

- Client app (mobile + web)
- Staff dashboard
- QuickBooks Online integration
- Financial dashboards + Health Score

PHASE 3

AI Agent

Weeks 9 – 14

- AI assistant for staff
- Client-facing AI insights
- What-If simulator
- Advanced analytics

PHASE 2

Intelligence

Weeks 5 – 8

- Full financial suite + AI alerts
- Advisor chat + documents
- Workflow engine for staff
- Calendar integration

PHASE 4

White-Label

Weeks 15 – 20

- Multi-tenant architecture
- Partner firm branding
- Tenant admin dashboards
- SaaS revenue infrastructure

Understanding Your Business

Harava Group's service lines, workflows, and client base in detail

Service Lines

- Accounting & Fractional CFO Services
- Tax Preparation (Individual & Business)
- Healthcare Consulting & CARF Accreditation
- Business Advisory & Valuation
- Nonprofit Consulting & Compliance
- Buy/Sell Transaction Advisory
- Capital Advisory & PE Investing
- Professional Trainings

Harava Operational Workflows

Harava staff dashboard mirrors these processes precisely.

WORKFLOW	STAGES
Client Onboarding	Lead → Qualification → Discovery → Proposal → Engagement Letter → Portal Setup → Doc Collection → Service Delivery
Tax Preparation	Organizer → Doc Collection → Preparation → Multi-Level Review → Client Review → E-File → Post-Filing
Monthly Bookkeeping Accounting	Bank Feeds → Categorization → Reconciliation → Adjusting Entries → Financial Statements → Review → Client Delivery
Business Valuation	Scoping → Data Collection → Normalization → Financial Modeling → Valuation Modeling → Technical Review → Draft Report → Final Report
Fractional CFO	Accounting → Financial Analysis → KPI Review → Cash Flow Forecasting → Tax Projections → Budget Planning → Strategy Session
Healthcare Accreditation	Lead → Qualification → Discovery → Proposal → Engagement Letter → Readiness Assessment → Gap Analysis → Action Plan → Policy & Procedure Development → Staff Training → Implementation Support → Mock Survey → Corrective Action → Onsite/Virtual Survey Support → Post-Survey Follow-Up → Continuous Compliance Plan
Advisory/Management Consulting	Lead → Qualification → Discovery & Diagnostic → Proposal → Engagement → Client On boarding → Strategy Development → Monitoring & Advisory/Work Fulfilment → Value Realization → Expansion / Retention
Professional Trainings	[Training Needs Assessment] → [Curriculum Design] → [Enrollment & Scheduling] → [Training Delivery] → [Practical Application] → [Assessment & Certification] → [Performance Monitoring] → [CPD & Continuous Learning] → [Knowledge Management] → [Program Optimization]

Platform Architecture

One backend, three frontends — role determines the experience

The Harava Platform is a single unified system. When a client logs in on mobile or web, they see their financial dashboards. When a staff member logs in, they see the engagement management tools. Same data, same API, different views.

Three Frontends, One Backend

FRONTEND	USERS	PURPOSE
Client Mobile App	Business clients	Financial dashboards, Health Score, advisor chat, documents — optimized for phone
Client Web App	Business clients	Same experience as mobile, optimized for desktop — accessible from any browser
Staff Dashboard	Harava team	Client management, workflow tracking, engagement pipeline, AI assistant, billing

Why this matter: A client uploads a document from their phone. It instantly appears in the staff dashboard for review. An advisor sends a message from the staff dashboard. The client gets a push notification on their phone and can read it on the web. One system, no synchronization headaches, no data silos.

Role-Based Access

ROLE	SEES	ACCESS SCOPE
Super Admin	Staff Dashboard	Full platform control — all clients, all staff, all settings, billing
Management	Staff Dashboard	Oversight, reporting, staff assignment, client profitability
Admin (Associates)	Staff Dashboard	Day-to-day client management, document review, messaging
Client	Client App (mobile + web)	Their own financial data only

Why Custom, Not Off-the-Shelf?

Existing CPA portals (Canopy, Liscio, Karbon) solve document sharing and basic messaging. Harava's vision goes beyond a client portal.

CAPABILITY	OFF-THE-SHELF	HARAVA PLATFORM
Document sharing & messaging	Yes	Yes
AI-powered insights from live QuickBooks data	No	Yes

CAPABILITY	OFF-THE-SHELF	HARAVA PLATFORM
Business Health Score with custom methodology	No	Yes
What-If Simulator for scenario modeling	No	Yes
Internal AI agent for staff	No	Yes
Workflow engine matching your specific operations	No	Yes
White-label licensing as SaaS revenue	No	Yes
Client access on mobile AND web	Limited	Yes

The bottom line: Harava is not buying a portal — Harava is building a product that delivers advisory intelligence to clients, operational efficiency to staff, and can be licensed to other firms as a revenue stream.

Mobile Application (iOS & Android)

A. Client Onboarding & Profile Management

- Welcome flow with business information capture (name, address, industry, entity type, fiscal year)
- Service selection (Accounting & Tax, Healthcare & Accreditation, Business Advisory)
- Personalized experience based on subscribed services

B. Financial Dashboard & Intelligence

- Executive dashboard: cash balance, revenue (MTD/YTD), profit, tax liability, health score (0-100)
- KPI tiles: revenue growth rate, EBITDA margin, net profit margin, ROIC, debt-to-equity, current ratio, AR outstanding
- Real-time sync with QuickBooks Online via API
- Financial reports: Income Statement, Balance Sheet, Cash Flow, Trial Balance, Budget vs Actuals (monthly, quarterly, annual)
- Report downloads in PDF format

C. Cash Flow Intelligence

- Operating cash flow and forecast visualization
- Cash timeline (past 60 days, next 90 days forecast)
- Cash in/out breakdown with weekly/monthly toggle
- Safe-to-spend calculator
- Receivables tracker with risk flags

D. Insights & Recommendations

- Priority alerts (cash risk, margin erosion, tax risk, unusual transactions)
- AI-assisted recommendation feed
- What-If simulator with adjustable sliders (revenue, hiring, expenses, owner pay)

E. Document Hub

- Categorized document storage (tax returns, financials, payroll, contracts)
- Compliance deadline tracking
- Client document upload (receipts, notices)

F. Calculators & Tools

- Tax calculator
- Mortgage calculator
- Loan amortization calculator
- Business valuation estimator

G. Financial News & Education

- Curated articles and newsletters
- Financial literacy content
- News feed integration

Phase 1 — MVP Scope

Weeks 1–4 · Client app + Staff dashboard + QuickBooks integration

Client Experience (Mobile + Web)

Business clients access the same experience on their phone or desktop browser:

TAB	CORE PURPOSE
Home	Health Score (0–100), KPI tiles, cash runway, advisor CTAs
Financials	Income Statement, Balance Sheet, Cash Flow Statement, Trial Balance, Budget, Budget vs Actuals — by month, quarter, or annual
Cash	Operating Cash Flow, Cash In/Out (weekly/monthly), Safe-to-Spend, receivables with risk flags
Profit	Gross/EBITDA/Net profit by service, customer, location; Cost Watch
Tax	Estimated federal + state liability, paid-to-date, next due date countdown
Insights	Priority alerts, AI recommendations, What-If simulator
Your Advisor	Secure threaded messaging, advisor notes, meeting booking
Docs	Secure document vault, compliance deadlines, upload/download
Tools	Financial calculators, articles, newsletters

Key KPIs (Home Dashboard)

KPI	FORMULA
Revenue Growth Rate	$(\text{Current Period Revenue} - \text{Prior Period Revenue}) / \text{Prior Period Revenue} \times 100$
EBITDA Margin	$(\text{Operating Income} + \text{Depreciation} + \text{Amortization}) / \text{Revenue} \times 100$
Net Profit Margin	$\text{Net Income} / \text{Revenue} \times 100$
Return on Invested Capital	$\text{Net Operating Profit After Taxes} / \text{Invested Capital}$
Debt-to-Equity Ratio	$\text{Total Debt} / \text{Shareholders' Equity}$
Current Ratio	$\text{Current Assets} / \text{Current Liabilities}$
AR Outstanding	Total accounts receivable with aging breakdown

Staff Dashboard (Web)

- Client directory with search, filters, and engagement status
- Client profile with KYC data and service selection

- Onboarding pipeline tracking (Lead → Active → Review → Archived)
- Engagement tracking per client per service
- Document request management (sent, received, missing, flagged)
- Respond to client messages and post advisor notes
- Deadline management with reminders

Authentication & Onboarding

- Built for Apple App Store, Google Play Store, and web browsers
- Two paths: public download/registration OR email invitation from Harava
- First-time KYC: Business Name, Address, Telephone, Email, Industry, Entity Type, State, Fiscal Year
- Service selection customizes the client experience (Accounting & Tax / Tax Only / Healthcare / Business Advisory)
- Managed authentication with OTP, password management, and biometric (fingerprint / Face ID)
- In-app and email notifications from day one

QuickBooks Online Integration

The foundation everything else is built on — engineered for accuracy and resilience

QuickBooks Online is the data source for the entire financial layer. Without reliable QBO integration, dashboards are empty, the Health Score can't calculate, and the AI has no context. This is the foundation, not a feature.

Sync Strategy

METHOD	TRIGGER	PURPOSE
Webhooks	Real-time	Transaction events — invoices, payments, expenses
Scheduled pulls	Every 15–30 min	Financial statement updates, KPI refresh
Full reconciliation	Nightly	Complete data integrity check across all accounts
User-triggered	On demand	Manual sync with cooldown

Engineering Principles

- **Data served from our own database** — dashboards never query QBO in real-time (too slow and rate-limited)
- **Financial precision** — all monetary calculations use exact decimal arithmetic, never floating-point
- **Chart of accounts mapping** — Harava staff map each client's QBO chart of accounts to a standardized structure for accurate KPI calculations
- **Data quality monitoring** — uncategorized transactions trigger confidence indicators on dashboards and alerts to staff
- **OAuth token management** — proactive token refresh with alerting when connections need re-authorization
- **Rate-limited job queue** — all QBO API calls run through a managed queue respecting Intuit's rate and concurrency limits

Why this matter: Harava clients are making real business decisions based on these numbers. A dashboard that silently shows wrong figures — due to uncategorized transactions or floating-point rounding — erodes trust. We surface data quality issues rather than hide them.

Business Health Score

Turning financial data into a single, actionable number

COMPONENT	WEIGHT	DATA SOURCE	SCORING LOGIC
Cash Health	30%	QBO cash, AR/AP	Runway months: $6+ = 100 \cdot 4-6 = 75 \cdot 2-4 = 50 \cdot <2 = 25$. Modified by AR aging.
Profitability	25%	QBO P&L	Net margin vs. industry benchmark. 3-month trend. EBITDA stability.
Growth	20%	QBO revenue	YoY revenue growth. Customer concentration risk. New vs. recurring revenue.
Tax Risk	15%	QBO + estimates	Liability vs. reserves. Filing deadline proximity.
Operational Efficiency	10%	QBO expenses	Current ratio. Expense growth vs. revenue growth. Debt-to-equity trend.

Advisory Triggers

SCORE	STATUS	ACTION
80–100	Healthy	Standard monitoring
60–79	Attention Needed	Advisor notified, client sees yellow indicators
40–59	At Risk	Priority alert, specific recommendations surfaced
0–39	Critical	Immediate advisor outreach, urgent action items

Note: The Health Score methodology will be reviewed and approved by Harava's licensed accountants before deployment. The platform will carry appropriate disclaimers that the score supports advisory conversations — not a substitute for professional judgment.

Phase 2 — Intelligence Layer

Weeks 5–8 · Full financial suite, alerts, chat, documents, workflow engine

Client Side

- **Cash Timeline** — 60 days past + 90 days projected. "At current pace, cash hits \$X on DATE."
- **Cash Flow Forecast** — Cash on Hand + Projected Inflows – Projected Outflows for next 4 weeks
- **Profit breakdown** — by service, customer, location. Green = profitable, red = loss-making.
- **Tax countdown** — next due date, estimated liability vs reserves, quarterly payment reminders
- **Rule-based alerts** — "AR is 15% above 90-day average" / "EBITDA declined 3 consecutive months"
- **Advisor chat** — secure threaded messaging with screenshot sharing
- **Document vault** — organized by category, compliance deadline tracking, upload/download
- **Calendar booking** — clients book appointments based on advisor availability
- **PDF export** — generate shareable PDF reports of financial dashboards for investors, lenders, and partners

Staff Side

- **Workflow engine** — configurable state machine for tax prep, bookkeeping, valuation, advisory pipelines
- **Staff assignment** — assign engagements to team members, track workload
- **Document management** — send request checklists, track completeness, review and approve
- **Deadline management** — automated reminders for tax filings, compliance items
- **Healthcare accreditation workflow** — track the full CARF accreditation process per client, assign consultants, enable self-service progress tracking for healthcare organizations
- Respond to client messages and post advisor notes visible to clients

Phase 3 — AI Agent

Weeks 9–14 · One AI service, two audiences

A team of specialized AI agents that removes up to 80% of operational bottlenecks. Your staff shifts from doing the work to overseeing AI-generated output — review, approve, done. What takes 3–4 days today takes 10 minutes.

The AI Agent Team (Internal)

AGENT	WHAT IT DOES
Report Drafting Agent	Automatically drafts financial reports, structures them by department (compliance, advisory, tax), and formats for client delivery. Staff reviews and approves.
Research & Synthesis Agent	Researches tax law changes, regulatory updates, and industry benchmarks. Synthesizes findings into advisor-ready briefs.
Client Risk Agent	Continuously monitors all client financials. Flags at-risk clients before advisors notice — cash runway declining, margins eroding, AR aging dangerously.
Accreditation Agent	Guides healthcare clients through CARF accreditation steps. Tracks progress, flags missing documentation, generates compliance checklists automatically.
Narrative Agent	Auto-generates quarterly review narratives, engagement summaries, and client-ready commentary from raw QBO data.

The shift: Harava accountants and advisors stop being the ones doing 100% of the work. The AI agents do the heavy lifting — drafting, researching, flagging, summarizing. Your team provides the human oversight: review, adjust, approve. This is how you scale from 70 clients to 200 without doubling your headcount.

For Clients

CAPABILITY	EXAMPLE
Recommendation Engine	"Raising prices 5% would improve annual profit by \$18,000 based on your margins"
What-If Simulator	Sliders for revenue, hiring, expenses → instant recalculated projections with narrative
Natural Language Queries	"How did my expenses compare to last quarter?" → data-backed answer

Phase 4 — White-Label SaaS

Weeks 15–20 · Turning the platform into recurring revenue

Other consulting firms subscribe to Harava's platform, rebrand it, and manage their own clients. Harava provides the infrastructure — partner firms deliver their advisory services.

How It Works

- Each firm gets their own branded experience (logo, colors, app name, custom domain)
- They manage their own clients and staff independently
- Harava infrastructure handles everything underneath
- Single mobile app on the stores — tenant branding loads after authentication
- Data completely isolated at the database level — one firm can never see another's data

Branding Tiers

TIER	WHAT'S INCLUDED
Standard	Branded portal within the Harava app — custom logo, colors, and name after login
Premium	Dedicated app store listing under the partner firm's own name and branding

Technical Architecture

Modern stack, financial-grade reliability

LAYER	TECHNOLOGY	RATIONALE
Client Mobile App	React Native + Expo	Single codebase for iOS & Android. OTA updates for JS changes.
Client + Staff Web	Next.js (React)	One web app, role-based views. Fast development, server-side rendering.
Backend API	Node.js + TypeScript	Type-safe, versioned API (/api/v1/). Same language across entire stack.
Database	PostgreSQL	Single schema. Industry standard for financial data. Exact decimal arithmetic.
Authentication	Clerk	Managed auth with biometric, multi-tenant support, SOC 2 compliant. Zero custom auth code.
File Storage	AWS S3 (encrypted)	AES-256 at rest. Signed URLs with expiry.
Job Queue	BullMQ (Redis)	QBO sync, notifications, AI processing, PDF generation. Rate-limited workers.
AI Engine	Claude API (Anthropic)	One service, role-based prompts. Insights, queries, report drafting.
Monitoring	Sentry + UptimeRobot	Error tracking, uptime monitoring, structured logging.

Key architecture decision: One backend serves all three frontends (client mobile, client web, staff web). This eliminates data synchronization issues — when a client uploads a document, staff sees it instantly. When staff posts a note, the client’s phone buzzes. No integration layer needed.

Security & Compliance

Built for sensitive financial data subject to regulatory scrutiny

REQUIREMENT	IMPLEMENTATION
Encryption at rest	AES-256 for database and all stored documents
Encryption in transit	TLS 1.2+ on all connections
Authentication	Managed by Clerk — OTP, password policies, biometric, SOC 2 compliant
Authorization	Role-based access enforced at the API level — never just the UI
Document security	Signed URLs with 4-hour expiry. No permanent public links.
Audit trail	Every access, modification, and login logged — who, what, when, from where
Tenant isolation	Application-level tenant filtering with tenant_id on all records. Migration path to RLS.

Compliance Frameworks

- **SOC 2 Principles** — encryption, audit logging, access controls, data isolation. Full certification requires additional organizational policies beyond the technology layer.
- **Nigeria Data Protection Act (NDPA) 2023** — consent management, cross-border transfer controls. AWS Africa region available if needed.
- **IRS Publication 4557** — safeguarding taxpayer data
- **GLBA Safeguards Rule** — financial data protection requirements

Backup & Disaster Recovery

- Automated daily database backups
- 30-day retention window
- Point-in-time recovery capability
- Recovery Point Objective (RPO) < 1 hour
- Recovery Time Objective (RTO) < 4 hours
- Document storage across multiple availability zones

Risk Mitigation & Quality Assurance

Acknowledging risks upfront and testing financial calculations rigorously

Risk Mitigation

RISK	MITIGATION
QuickBooks API changes or outages	Queue-based sync with retry logic. Platform functions with cached data during outages. Token health monitoring with alerts.
App store review delays	Submit end of Week 4, buffer 1–2 weeks. Android internal track for pilot testing during Apple review.
Scope discovery	Phase 1 scope locked by this document. New requests estimated separately.
Data quality in QBO	Quality scoring per client, confidence indicators on dashboards. Pilot with clean clients first.
Timeline pressure	Weekly checkpoint demos. Scope adjusted within phase if needed — never quality.

Testing & QA

- **Automated tests** for all financial calculations (KPIs, Health Score, Safe-to-Spend) with verified expected outputs
- **QBO sync tested** against Intuit's sandbox environment before any production connection
- **Staging environment** mirrors production — all features verified before deployment
- **UAT access** for Harava's team at end of Week 3 with structured test checklist
- **CPA/Accountant validation** — dashboard outputs checked against manually prepared financials for pilot clients

Delivery Timeline

Phase 1 week-by-week, with pilot rollout plan

WEEK	DELIVERABLES
Week 1	Project setup · Authentication (Clerk) · Database schema · QBO OAuth connection · Initial data sync engine
Week 2	Client app — Home dashboard (Health Score + 7 KPIs + cash runway) · Income Statement, Balance Sheet, Cash Flow from QBO
Week 3	Client web app (same views) · Staff dashboard (client list, engagement tracking, document management) · Basic notifications · UAT access
Week 4	Trial Balance, Budget, Budget vs Actuals views · Polish · QA testing · Bug fixes · App store submission

App Store Note: Apple typically reviews financial apps within 1–7 business days. To submit at end of Week 4. Android internal track is available for pilot testing during Apple's review. Client web app is accessible immediately.

Pilot Rollout — Week 5

- 01 **Pilot invitations**
5–10 clients identified by Harava receive invitations
- 02 **QuickBooks connection**
Each client connects their QBO account via OAuth — approximately 2 minutes
- 03 **Account mapping**
Harava staff configure chart of accounts mapping per client
- 04 **Validation**
Dashboard outputs verified against manually prepared financials
- 05 **Broader rollout**
Remaining clients onboarded in batches of 10–15 through Weeks 6–8

Rollout

Transparent, phase-based pricing

PHASE 1 — MVP

Client app (mobile + web) · Staff dashboard · QBO integration · Financial dashboards · Health Score · Notifications

PHASE	SCOPE
Phase 2	Full financials, AI alerts, chat, documents, workflow engine, calendar, PDF export
Phase 3	AI agent team (staff + client), What-If simulator, advanced analytics
Phase 4	White-label multi-tenancy, partner branding, tenant admin

John

Harava *Academy...ProEd AI*

Training & Certification Platform

ProEd AI is an AI-powered professional education engine that delivers personalized, real-world learning in accounting, tax, healthcare consulting, and business advisory—equipping professionals with the skills and certifications needed to excel in today's dynamic business environment

Why a Separate Platform

Different users, different data, different value — architecturally independent from the Harava Platform

Harava Academy serves a fundamentally different audience than the Harava Platform. An individual learning about S-Corp elections has no need for a QuickBooks-powered financial dashboard. A business client checking their cash runway has no need for course progress tracking. This is for professionals interested in continuous education.

Harava Academy is a standalone training and certification platform where individuals access professional development courses in accounting, tax, healthcare consulting, and business advisory. It positions Harava Group as a knowledge authority — and creates a direct revenue stream from course sales.

Two Platforms, One Login

The Academy shares authentication with the Harava Platform (same user account, same login). But everything else is separate — different data models, different user flows, different backend services. A user who is both a business client AND a learner can access both seamlessly.

SCENARIO	REVENUE
50 enrollments at xx/course	
100 enrollments at xx/course	
200 enrollments at \$xx/course	
Subscription model: 100 users at \$xx/month	

Platform Scope

Everything needed to launch, deliver, and monetize professional training

Learner Experience (Web + Mobile)

- Browse course catalog by category (Accounting, Tax, Healthcare, Business Advisory)
- Enroll in courses — free or paid
- Watch video lessons with adaptive quality streaming
- Read document-based lessons (guides, case studies, templates)
- Take quizzes with immediate scoring and feedback
- Track progress across all enrolled courses
- Download supplementary materials (PDFs, templates, worksheets)
- Receive certificate upon course completion
- Share certificates via unique verification URL

Course Structure

LEVEL	DESCRIPTION	EXAMPLE
Program	Top-level grouping	"Tax Fundamentals for Small Business"
Course	A complete learning unit	"When to Switch to S-Corp"
Module	A section within a course	"Understanding Entity Types"
Lesson	Individual content unit	Video: "S-Corp vs LLC Tax Comparison" (12 min)

Each lesson can be a **video**, **document**, **quiz**, or **downloadable resource**. Completion rules are configurable: videos must be watched to 90%+, quizzes must score above passing threshold.

Certification

- System-generated PDF certificate upon course completion
- Each certificate has a unique verification code
- Public verification URL — employers or regulators can confirm authenticity
- Certificate includes: learner name, course title, completion date, Harava branding

Admin — Content Management

- Create and organize programs, courses, modules, and lessons
- Upload video content (processed by professional video hosting infrastructure)
- Upload documents and downloadable resources

- Create quizzes with multiple question types
- Set pricing (free, one-time purchase, or subscription)
- View learner progress, completion rates, and revenue
- Manage certificate templates and branding

Training Portal (LMS Module)

K. Course Management & Delivery

- Course catalog with categories and search
- Video player with in-app playback (content-protected, no device downloads)
- PDF and document viewer within the portal
- Course progress tracking and bookmarks
- Offline viewing capability within the app (cached, not downloadable to device storage)

L. User Enrollment & Payments

- Course sign-up and enrollment management
- Payment integration: bank transfer verification, pay-later/invoice system
- Payment gateway integration for card/transfer payments
- Enrollment receipt and invoice generation

M. Certification

- Milestone-based progress tracking
- Automated certificate generation upon course completion
- Certificate download (PDF with unique verification code)

Admin Back-Office (Web Application)

N. User & Client Management

- User registration approval and management
- Role-based access control (admin, advisor, client)
- Client profile management and service assignment

O. Content & Training Management

- Upload and manage training materials (video, PDF, documents)
- Course creation, pricing, and publishing
- Student progress and enrollment tracking
- Certificate template management

P. Financial & Report Management

- QuickBooks sync status monitoring
- Report generation and distribution
- Document management and sharing

Q. Analytics & Notifications

- Platform usage analytics dashboard
- Revenue and payment tracking
- Push notification management
- Automated email/SMS notifications

Technical Architecture

Standalone system sharing only authentication with the Harava Platform

LAYER	TECHNOLOGY	RATIONALE
Learner Web App	Next.js	SEO-friendly course catalog. Fast page loads for content browsing.
Admin Panel	Next.js	Same framework as Platform — shared skills, consistent experience.
Backend API	Node.js + TypeScript	Separate API from Platform. Independent deployment and scaling.
Database	PostgreSQL	Separate tables from Platform. Courses, enrollments, progress, certificates.
Authentication	Clerk (shared)	Same login as Platform — one account across both products.
Video Hosting	Mux or Cloudflare Stream	Adaptive quality, CDN-delivered. Not self-hosted — reliable at any scale.
Payments	Stripe (US) + Paystack (Nigeria)	Course purchases, subscriptions. Handles both markets.
File Storage	AWS S3	PDFs, templates, worksheets. Signed URLs for access control.

Independence by design: The Academy has its own API, its own database tables, and its own deployment pipeline. The only shared component is Clerk authentication — so a user logs in once and can access both the Platform and the Academy. If the Academy needs to scale independently (viral course launch), it can — without affecting the Platform.

Content Protection

- Signed URLs for video access — expire after 4 hours
- No download option for premium video content
- Downloadable materials (PDFs, templates) are separate content types with explicit download permission
- Progress tracking verifies actual engagement — skipping ahead doesn't count as completion

Timeline

Single delivery phase

HARAVA ACADEMY

Course catalog · Video delivery · Progress tracking · Quizzes · Certification · Payments · Admin content management

Timeline: 6–8 Weeks

WEEK	DELIVERABLES
Weeks 1–2	Database schema · Course catalog · Enrollment flow · Video hosting setup · Admin content authoring
Weeks 3–4	Lesson viewer (video + document + quiz) · Progress tracking · Downloadable materials
Weeks 5–6	Certificate generation · Public verification URL · Payment integration (Stripe + Payscale)
Weeks 7–8	Admin dashboard (learner progress, revenue, analytics) · Polish · QA · Launch
Includes	Hosting · Video infrastructure · Bug fixes · Security patches · Up to 6 hours of enhancements

John

Accredi AI

Carf, The Joint Commission, Accreditation, Compliance Platform

Accredi AI – is an AI-powered accreditation and compliance aspect of the platform that enables healthcare organizations to achieve and maintain continuous survey readiness—transforming complex regulatory requirements into real-time, actionable insights

John

SECTION 06

Accredi AI

AI-Powered Continuous Accreditation & Compliance System

Product Architecture (High-Level)

AccrediAI Platform Layers:

1. Standards Intelligence Layer
2. Compliance Execution Layer
3. Performance & Outcomes Layer
4. Workforce & Training Layer (ProEd AI Integration)
5. Analytics & AI Decision Layer
6. Mobile Execution Layer

Core Modules (System Design)

Module 1: Standards Intelligence Engine

(CARF + Joint Commission Brain)

Capabilities:

- Full digital standards library:
 - CARF (OMHC, PRP, IOP/OP, PHP etc.)
 - Joint Commission (RSA, Homecare)
- AI interpretation:
 - Plain-English summaries
 - "What this means operationally"
- Crosswalk mapping:
 - CARF ↔ Joint Commission ↔ COMAR/OHCQ

Output:

Each standard becomes:

- A requirement
- A task
- A measurable control

Module 2: Compliance Management System

(Execution Engine)

Features:

- Compliance register (all standards tracked)
- Task assignment:
 - Owner
 - Due date
 - Priority
- Evidence tracking:
 - Documents
 - Logs
 - Reports
- Status tracking:
 - Not started / In progress / Compliant / At risk

Module 3: Gap Analysis & Readiness Scoring

Features:

- AI-powered self-assessment questionnaires
- Readiness score:
 - Overall (e.g., 82%)
 - By domain (Governance, Clinical, HR, Safety)
- Gap categorization:
 - Policy gaps
 - Documentation gaps
 - Training gaps
 - Performance gaps

Output Example:

“CARF Readiness: 78%

High-risk gaps: Performance Measurement Plan, Emergency Preparedness Drills”

Module 4: Policy & Document Control System

Features:

- Pre-built templates:
 - CARF-compliant policies
- Section 1 - Aspire To Excellent**
- 1A - Leadership Structure
 - 1B - Corporate Governance
 - 1C - Strategic Plan
 - 1D - Persons Served & Other Stakeholders
 - 1E - Legal Implementation & Requirements
 - 1F - Financial Management
 - 1G - Risk Management
 - 1H - Health and Safety
 - 1I - Workforce Development
 - 1J - Technology
 - 1K- Rights of Persons Served
 - 1L - Accessibility
 - 1M - Performance Measurement & Management
 - 1N- Performance Improvement & Evaluation

Section 2 – General Standards

- 2A – Program Service Structure
- 2B – Screening and Access to Services
- 2C – Person Centered Plan
- 2D – Transition and Discharge
- 2E – Medication Use
- 2F – Promoting Nonviolent Practices
- 2G – Records of the Persons Served
- 2H – Quality Records Management
- 2I – Service Delivery Using Information and Communication Technologies
- 2J – Non-Violent Practices

Section 3 – Core Treatment Programs Standards

Section 4 – Core Support Program Standards

Section 5 – Specific Population Designation Standards

Section 6 – Specialized Populations

- Joint Commission policies

Section 1 - Aspire To Excellent

- 1A - Leadership Structure
- 1B - Corporate Governance
- 1C - Strategic Plan
- 1D - Persons Served & Other Stakeholders
- 1E - Legal Implementation & Requirements
- 1F - Financial Management
- 1G - Risk Management
- 1H - Health and Safety
- 1I - Workforce Development
- 1J - Technology
- 1K- Rights of Persons Served
- 1L - Accessibility
- 1M - Performance Measurement & Management
- 1N- Performance Improvement & Evaluation

Section 2 – General Standards

- 2A – Program Service Structure
- 2B – Screening and Access to Services
- 2C – Person Centered Plan
- 2D – Transition and Discharge
- 2E – Medication Use
- 2F – Promoting Nonviolent Practices
- 2G – Records of the Persons Served
- 2H – Quality Records Management
- 2I – Service Delivery Using Information and Communication Technologies
- 2J – Non-Violent Practices

Section 3 – Core Treatment Programs Standards

Section 4 – Core Support Program Standards

Section 5 – Specific Population Designation Standards

Section 6 – Specialized Populations

- Version control
- Approval workflows
- E-signatures

SECTION 09

- Central repository (audit-ready)

Key Advantage:

Everything a surveyor asks for = 1-click retrieval

Module 5: Performance Measurement Engine

Designed specifically for CARF requirements

Features:

- KPI builder:
 - Clinical outcomes
 - Patient satisfaction Surveys & Analysis
 - Stakeholders Satisfaction Surveys & Analysis
 - Employee Satisfaction Surveys & Analysis
 - Operational efficiency
- Target setting:
 - Historical
 - Industry benchmark
- Analysis engine:
 - Trends
 - Variance
 - Root cause

Auto-generates:

- Quarterly reports
- Annual performance analysis

Module 6: Training & Competency (ProEd AI Integration)

Features:

- Role-based training paths:
 - Clinicians
 - Supervisors
 - Admin staff
- Required topics:
 - Ethics
 - Suicide risk
 - Cultural competency
- Certification tracking
- Training logs (audit-ready)

Module 7: Audit & Survey Simulation Engine

Features:

- Mock CARF surveys
- Mock Joint Commission surveys
- AI-generated survey questions
- Evidence validation

“Survey Mode”:

- Simulate real accreditation visit
- Identify missing elements instantly

Module 8: Incident & Risk Management

Features:

- Incident reporting
- Root Cause Analysis (RCA)
- Corrective Action Plans (CAPA)
- Compliance tracking logs

Module 9: Alerts & Continuous Monitoring

Real-Time Alerts:

- Missing documentation
- Expired policies
- KPI failures
- Training lapses

3. Mobile App Design (AccrediAI Mobile)

Core Principle:

"Compliance happens in real time—not in the office."

Mobile Features

1. Dashboard (Role-Based)

- Compliance score
- Risk alerts
- Tasks due today

2. Daily Compliance Tasks

- Assigned tasks checklist
- Status updates
- Quick actions

3. Documentation Capture

- Upload documents
- Take photos (facility compliance)
- E-signatures

4. AI Compliance Assistant

User asks:

- "Are we ready for Joint Commission or Carf survey?"
- "What are our top risks?"

AI responds with:

- Score
- Gaps
- Action plan

5. Survey Mode (Critical Feature)

- Real-time survey simulation
- Checklist + scoring
- Evidence requests

6. Alerts & Notifications

SECTION 011

- Push notifications:
 - "Emergency drill overdue"
 - "Client file incomplete"

4. End-to-End Workflow

Step-by-Step:

1. Import standards (CARF + Joint Commission)
2. Map to organization structure
3. Run AI gap analysis
4. Assign tasks & owners
5. Collect evidence (mobile + web)
6. Track performance metrics
7. Train staff (ProEd AI)
8. Simulate survey
9. Achieve continuous readiness

5. Data Model (Simplified)

Core Objects:

- Organization
- Program/Service
- Standard
- Requirement
- Task
- Evidence
- KPI
- Training Record
- Incident
- Audit Result

6. Technical Architecture

Frontend:

- Web: React / Next.js
- Mobile: Flutter or React Native

Backend:

- Node.js / Python (FastAPI)
- PostgreSQL (structured data)
- S3 (documents)

AI Layer:

- LLM for:
 - Standard interpretation
 - Gap analysis
 - Recommendations

Integrations:

- EHR systems
- HR systems
- Accounting (FinSight AI)

7. Monetization Model (SaaS)

SECTION 012

Pricing Tiers:

- **Starter:** Small providers
- **Professional:** Multi-site organizations
- **Enterprise:** Health systems

Add-ons:

- Survey simulation
- Benchmarking
- Consulting (Harava advisory)

8. Strategic Positioning

AccrediAI is the operating system for continuous accreditation readiness.

9. Competitive Advantage

- CARF + Joint Commission in ONE system
- AI-driven (not static checklists)
- Integrated training (ProEd AI)
- Integrated financial compliance (FinSight AI)
- Mobile-first execution
